Care and Maintenance of your Precision ACC splitter

Thank you for your purchase. Your new ACC splitter should bring you a lifetime of precision splitting and trimming pleasure.

Your splitter has been constructed with the highest quality materials possible and to exacting specifications with tight tolerances.

To help maintain your precision tool in top condition we recommend the following routine procedures.

1. Store in a dry place when not in use. The guide rails and lead screw follower are very hard but not rust proof.
2. Wipe off guide rails and lead screw with dry cotton cloth or use high-pressure air to clean.
3. Use a small amount of light oil or SuperLube™ on precision surfaces then wipe to spread and coat.

We also have available, new sets of 8% cobalt cutters as spares while you send us your worn cutters for resurfacing for a small fee. Your cutters should last for many, many years and will not be disposed of until they become too short.

For Safety sake please be sure to:

- Keep hands away from moving parts.
- Use caution when working near your very sharp splitter cutters.
- Use safety glasses when using your splitter.
- Your splitter may be mounted using 1/4" screws or bolts.

Please Absolute Clarity at (860) 583-0502 if you have any specific questions or custom requirements.

You Will See The Difference!
